1. Uvod:

Korišćeni programski jezici

Za izradu sajta korišćene su sledeće tehnologije:

- HTML
- CSS
- JavaScript
- jQuery
- AJAX
- PHP
- Bootstrap

Kod je pisan u Visual Studio Code-u.

Opis funkcionalnosti

Kod je organizovan tako da postoji samo jedna strana index.php, postoje fiksni delovi koji su isti na svakoj strani i oni se nalaze u folderu fixed, delovi koji su posebni za svaku stranu, učitavaju se u zavisnosti od zahtevane strane sajta. Podaci su učitani dinamički iz baze, ajaxom uglavnom, zbog potreba filtriranja, paginacije i prikaza. Mogućnost logovanja i registracije, takođe urađeno ajaxom. Ulogovani korisnici na contact strani imaju mogućnost da pošalju poruku, i ona se upisuje u bazu, zajedno sa id-om korisnika koji je tu poruku napisao. Na stranici menu, nalazi se funkcionalnost filtriranja po kategoriji i funkcionalnost pretrage. Takođe, na ovoj strani nalazi se i export menija u Excelu. Na strani autor, mogućnost eksporta u Word. Admin strana, na ovoj strani postoji mogućnost

unos novog korisnika, brisanje korisnika, kao i update koji je uradjen preko ajaxa, klikom na update, automatski se popunjava forma za update. Takodje sve ovo omoguceno je i za blogove kao i ispis poruka koje su ostavili korisnici. Blogove ispisuju admini, ispod bloga stoji ime admina, koji je napisao post, ovo je uradjeno preko sesije. Blogovi imaju mogucnost prikaza putem paginacije, takodje uradjeno ajaxom. Postoji funkcija koja belezi pristup stranicama (pristup.txt), kao i funkcija koja prihvata greske i upisuje ih u tekstualni fajl errors.txt. Validacije postoje i na klijentskoj i na serverskoj strani. U futeru se nalazi poslednji blog.

Template

Koriscen je template, ali je u velikoj meri izmenjen sto se tice funkcionalnosti i izgleda.
